

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): An information processing terminal, comprising:  
bio-information detecting means for detecting bio-information on a user;  
psychology analyzing means for analyzing the user's psychology ~~corresponding to~~  
based on the detected bio-information;  
word extracting means for extracting characteristic ones of words used in a sentence  
created by the user;  
word storing means for storing the extracted words;  
information generating means for generating information matching ~~[[the]]~~ a result of  
the psychology analysis including a word or a sentence generated from the extracted words;  
and  
output means for providing the generated information as an output.

Claim 2 (Original): The information processing terminal according to claim 1,  
wherein the bio-information is at least one or a combination of selected ones, selected from  
among sweating, heartbeat, pulse-beat, aspiration, blinking, eye movement, gaze time, pupil  
diameter, blood pressure, brain wave, body movement, body posture, skin temperature, skin  
electric resistance, MV (microvibration), myogenic potential and SPO2 (saturation of oxygen  
in the blood).

Claim 3 (Original): The information processing terminal according to claim 1, further  
comprising raw data storing means having raw data stored therein,

the information generating means being adapted to generate information corresponding to the user's psychology from raw data selectively read out of the raw data storing means.

Claim 4 (Original): The information processing terminal according to claim 1, further comprising transmitting/receiving means for sending the result of psychology analysis to an external device and receiving raw data selected by the external device on the basis of the received result of psychology analysis,

the information generating means being adapted to generate information matching the result of psychology analysis from the raw data received from the external device.

Claims 5-6 (Cancelled).

Claim 7 (Currently Amended): The information processing terminal according to claim ~~[[5]]~~ 1, wherein the output means is displaying means for displaying a word or sentence generated by the information generating means.

Claim 8 (Currently Amended): The information processing terminal according to claim ~~[[5]]~~ 1, wherein the output means includes audio output means for converting the word or sentence generated by the information generating means into an audio output.

Claim 9 (Currently Amended): A communications system including an information providing device and information processing terminals, ~~wherein:~~ ~~[[the]]~~ an information processing terminal ~~includes~~ comprising:

bio-information detecting means for detecting bio-information on a user,

psychology analyzing means for analyzing the user's psychology ~~corresponding to~~  
based on the detected bio-information,

word extracting means for extracting characteristic ones of words used in a sentence  
created by the user,

word storing means for storing the extracted words,

transmitting/receiving means for sending ~~[[the]]~~ a result of the psychology analysis to  
the information providing device and receiving information generated by the information  
providing device on the basis of the result of psychology analysis and matching the result of  
psychology analysis, the information including a word or a sentence generated from the  
extracted words, and

output means for providing the received information as an output.

Claim 10 (Original): The communications system according to claim 9, wherein the  
information providing device includes a raw data storing means having raw data stored  
therein,

the information generating means being adapted to generate information  
corresponding to the user's psychology from raw data selectively read out of the raw data  
storing means.

Claims 11-12 (Cancelled).

Claim 13 (Currently Amended): The communications system according to claim  
~~[[11]]~~ 9, wherein the transmitting means in the information providing device sends the word  
or sentence as an e-mail to the information processing terminal.

Claim 14 (Currently Amended): The communications system according to claim [[11]] 9, wherein the information providing device further includes audio output means for converting a word or sentence generated by the information generating means into an audio output,

the audio output from the audio output means being sent to the information processing terminal.

Claim 15 (Currently Amended): The communications system according to claim [[11]] 9, wherein the information processing terminal further includes audio output means for converting a word or sentence received by the transmitting/receiving means into an audio output,

the audio output from the audio output means being provided from the output means.

Claim 16 (Original): The communications system according to claim 9, wherein the bio-information is at least one or a combination of selected ones, selected from among sweating, heartbeat, pulse-beat, aspiration, blinking, eye movement, gaze time, pupil diameter, blood pressure, brain wave, body movement, body posture, skin temperature, skin electric resistance, MV (microvibration), myogenic potential and SPO2 (saturation of oxygen in the blood).

Claim 17 (Currently Amended): A communications system including an information providing device and an information processing terminal, wherein:

the information processing terminal includes bio-information detecting means for detecting bio-information on a user, word extracting means for extracting characteristic ones of words used in a sentence created by the user, word storing means for storing the extracted

words, transmitting/receiving means for sending the detected bio-information and the extracted words to the information providing device and receiving information generated by the information providing device on the basis of the bio-information, and output means for providing the received information as an output; and

the information providing device includes psychology analyzing means for analyzing the user's psychology ~~corresponding to~~ based on the received bio-information, information generating means for generating information matching ~~[[the]]~~ a result of the psychology analysis, the information including a word or a sentence generated from the extracted words, and transmitting means for sending the generated information to the information processing terminal.

Claim 18 (Original): The communications system according to claim 17, wherein the information providing device includes raw data storing means having raw data stored therein, the information generating means being adapted to generate information corresponding to the user's psychology from raw data selectively read out of the raw data storing means.

Claims 19-20 (Cancelled).

Claim 21 (Currently Amended): The communications system according to claim ~~[[19]]~~ 17, wherein the transmitting means in the information providing device sends the word or sentence as an e-mail to the information processing terminal.

Claim 22 (Currently Amended): The communications system according to claim ~~[[19]]~~ 17, wherein the information providing device further includes audio output means for

converting a word or sentence generated by the information generating means into an audio output,

the audio output from the audio output means being sent to the information processing terminal.

Claim 23 (Currently Amended): The communications system according to claim [[19]] 17, wherein the information processing terminal further includes audio output means for converting a word or sentence received by the transmitting/receiving means into an audio output,

the audio output from the audio output means being provided from the output means.

Claim 24 (Original): The communications system according to claim 17, wherein the bio-information is at least one or a combination of selected ones, selected from among sweating, heartbeat, pulse-beat, aspiration, blinking, eye movement, gaze time, pupil diameter, blood pressure, brain wave, body movement, body posture, skin temperature, skin electric resistance, MV (microvibration), myogenic potential and SPO2 (saturation of oxygen in the blood).

Claim 25 (Currently Amended): A communications system capable of information communications between communication devices via an information providing device, the system comprising:

a first communications device including:

bio-information detecting means for detecting bio-information on the user;

psychology analyzing means for analyzing psychology ~~corresponding to~~ based on the detected bio-information;

word extracting means for extracting characteristic ones of words used in a sentence created by the user;

word storing means for storing the extracted words; and

transmitting means for sending [[the]] a result of the psychology analysis and the extracted words to the information providing device;

information generating means for generating information matching the received result of the psychology analysis, the information including a word or a sentence generated from the extracted words; and

transmitting means for sending information matching the result of the psychology analysis to a second communications device.

Claim 26 (Original): The communications system according to claim 25, wherein the information providing device includes raw data storing means having raw data stored therein, the information generating means being adapted to generate information corresponding to the user's psychology from raw data selectively read out of the raw data storing means.

Claims 27-28 (Cancelled).

Claim 29 (Currently Amended): The communications system according to claim [[27]] 25, wherein the transmitting means in the information providing device sends the word or sentence as an e-mail.

Claim 30 (Original): The communications system according to claim 29, wherein the second communications device includes output means for providing the received word or sentence as an output,

the output means being displaying means for displaying the received word or sentence.

Claim 31 (Currently Amended): The communications system according to claim [[27]] 25, wherein the information providing device further includes audio output means for converting a word or sentence generated by the information generating means into an audio output,

the audio output from the audio output means being sent to the second communications device.

Claim 32 (Original): The communications system according to claim 31, wherein the second communications device includes audio output means for providing a word or sentence received as an audio output to outside.

Claim 33 (Original): The communications system according to claim 25, wherein the bio-information is at least one or a combination of selected ones, selected from among sweating, heartbeat, pulse-beat, aspiration, blinking, eye movement, gaze time, pupil diameter, blood pressure, brain wave, body movement, body posture, skin temperature, skin electric resistance, MV (microvibration), myogenic potential and SPO2 (saturation of oxygen in the blood).

Claim 34 (Currently Amended): A communications system capable of information communications between communication devices via an information providing device, the system comprising:

a first communications device including:

bio-information detecting means for detecting bio-information on the user;

word extracting means for extracting characteristic ones of words used in a sentence created by the user;

word storing means for storing the extracted words; and

transmitting means for sending the detected bio-information and the extracted words to the information providing device;

psychology analyzing means for analyzing psychology ~~corresponding to~~ based on the received bio-information;

information generating means for generating information matching the received result of the psychology analysis, the information including a word or a sentence generated from the extracted words; and

an information providing device including transmitting means for sending the information matching the result of the psychology analysis to a second communications device.

Claim 35 (Original): The communications system according to claim 34, wherein the information providing device includes raw data storing means having raw data stored therein, the information generating means being adapted to generate information matching the result of psychology analysis from raw data selectively read out of the raw data storing means.

Claims 36-37 (Cancelled).

Claim 38 (Currently Amended): The communications system according to claim [[36]] 34, wherein the transmitting means in the information providing device sends the word or sentence as an e-mail.

Claim 39 (Currently Amended): The communications system according to claim [[36]] 34, wherein the second communications device includes output means for providing the received word or sentence as an output,

the output means being displaying means for displaying the received word or sentence.

Claim 40 (Currently Amended): The communications system according to claim [[36]] 34, wherein the information providing device further includes audio output means for converting a word or sentence generated by the information generating means into an audio output,

the audio output from the audio output means being sent to the information processing terminal.

Claim 41 (Original): The communications system according to claim 40, wherein the second communications device includes audio output means for providing a word or sentence received as an audio output to outside.

Claim 42 (Original): The communications system according to claim 34, wherein the bio-information is at least one or a combination of selected ones, selected from among

sweating, heartbeat, pulse-beat, aspiration, blinking, eye movement, gaze time, pupil diameter, blood pressure, brain wave, body movement, body posture, skin temperature, skin electric resistance, MV (microvibration), myogenic potential and SPO2 (saturation of oxygen in the blood).
